

## **NIKA-LUBE**

ROPE PERFORMANCE LUBRICANT

---

**NIKA-LUBE** is a special lubricant, used to improve the abrasion performance of synthetic fiber ropes. The main benefit of this product is the enhanced abrasion resistance both in yarn/yarn and yarn/metal surface friction.

## Application instructions

- Carefully insert the NIKA-LUBE into the Spray Can delivered with the product (20lt plastic bottle). The NIKA-LUBE product is already diluted in water (there is no need for further addition of water) and is ready for application.
- NIKA-LUBE can be applied in any fiber rope surface that is intended to be used in high abrasion conditions. The coefficient of friction will be decreased and thus the resistance to abrasion will be more effective.
- Turn the nozzle clockwise in order to spread the NIKA-LUBE more effectively on the rope surface. The distance of spray should be approximately 20cm from the rope surface.

- The product can also be applied on the NIKA-Protectors. Before placing the NIKA-Protector in the final position on the chock, spray along each side; about 5-8 sprays on each side (upside and downside) will be able to lubricate the surface of the NIKA-Protector. It is also advised to spray the inside of the Nika-Protector as well. Some spraying on the metal surfaces (i.e. chocks) can also be beneficiary.

For each mooring operation, repeat the same procedure of application in order to have good performance.

**FIRE-FIGHTING MEASURES:** Keep away from sources of ignition. No smoking.

**HAZARDS IDENTIFICATION:** At the event of eye contact, rinse immediately with plenty of water.

### **DISCLAIMER**
